

Are your animals at risk every time you feed them?

73% OF TMR SAMPLES HAVE CLOSTRIDIA.¹

Clostridia prevalence on farms works in a cycle. By changing the clostridial diversity in animal feed, forages and manure, CERTILLUS™ helps your cows become resilient in the face of everyday uncertainties.

FEED

In feed, CERTILLUS changes the clostridial diversity towards a lower risk of disease, helping cattle maintain consistent performance in stressful environments.

DAIRY

- Regional formulations
- Calf LC
- Calf HD

BEEF

- Regional formulations

FORAGES

In ensiled feeds, CERTILLUS inoculants promote optimal fermentation, locking in nutrients to avoid spoilage.

- Haylage 250T WS
- Haylage 500T WS
- Haylage 50T DG
- Corn Silage 250T WS
- Corn Silage 500T WS
- Corn Silage 50T DG
- Buchneri 200T WS
- Prime 250T WS
- Prime 500T WS
- Prime Buchneri 200T WS

MANURE

CERTILLUS manure treatment accelerates the decomposition of waste to reduce odors and thin solids for easier pumping.

- Manure Treatment Kickoff
- Manure Treatment
- Manure Treatment Throw Packs
