

#ScienceHearted

Solutions to optimize consistency and efficiency in your operation.

ESSENTIOM, the only bypass source of both Omega-3 and Omega-6 Essential Fatty Acids (EFAs), helps to improve immune and uterine health, translating to increased conception rates.

- **Improves daily gains:** When fed to heifers, ESSENTIOM™ delivers more energy, helping to optimize size at first breeding.
- **Boosts pregnancy stats:** ESSENTIOM reduces the calving interval and narrows the calving window because fertility is optimized post-calving, allowing animals to come back into heat sooner and breed back quicker.
- **More efficient performance:** Increased energy translates to more efficient production of milk and less dependence on land and pasture resources. This results in more consistent and efficient preweaning gain.

ESSENTIOM™

Feeding rates:

- Heifers: 0.25 lb./head/day beginning 30 days prior to the breeding window
- Lactating cows: 0.25 lb./head/day from calving through the breeding window

FERMENTEN delivers more metabolizable protein (MP) so cows produce milk that provides greater efficiency and uniformity in heifer growth within a group.

- **Uniform:** FERMENTEN™ delivers more high-quality MP for growing heifers, leading to improved growth rates, translating to more consistent first-breeding.
- **Efficient:** FERMENTEN improves feed and milk production efficiency in nursing cows.
- **Consistent:** FERMENTEN delivers higher quality protein and essential amino acids for more consistent nutrition and results.

FERMENTEN™

Feeding rate:

- 3% of the total ration DM
